

Weekly Learning Report: Django Fundamentals

Name: Amahle Ndumiso Nqubeko Sibisi

Date: [28 August 2026]

Topic: Django Fundamentals and Core Concepts

Overview

This week, I focused on learning Django, a high-level Python web framework that enables rapid development of secure, scalable, and maintainable web applications. Through hands-on practice and theoretical study, I developed an understanding of **Django's architecture**, components, and development workflow, and this is all based on the Model-View-Template (MVT) design pattern.

Key Concepts Learned

1. Creating a Django Application
2. Setting up the environment
3. Installing Django
4. Creating a Project
5. Creating an App
6. Working with Templates
7. Working with Models

This is better demonstrated than written down. These concepts provide a solid foundation in Django development. I gained both theoretical and practical knowledge through the course and hope to learn more.
